## FTP Server

### **I. Tujuan:**

- Mahasiswa dapat memahami penggunaan service ftp pada sistem operasi unix/linux.
- Mahasiswa dapat melakukan proses instalasi dan konfigurasi ftp server pada sistem operasi unix/linux.
- Mahasiswa dapat memahami perbedaan antara user ftp dan anonymous ftp beserta kelbihan dan kekurangan masing-masing.
- Mahasiswa memahami hal-hal penting yang berhubungan dengan sistem keamanan pada service ftp.

### **II. Alat-alat:**

1.Straight Cable	3 buah
2.Switch/hub	1 buah

### **III. Dasar teori**

FTP menggunakan protokol transport TCP untuk mengirimkan file. TCP dipakai sebagai protokol transport karena protokol ini memberikan garansi pengiriman dengan FTP yang dapat memungkinkan user mengakses file dan directory secara interaktif, diantaranya:

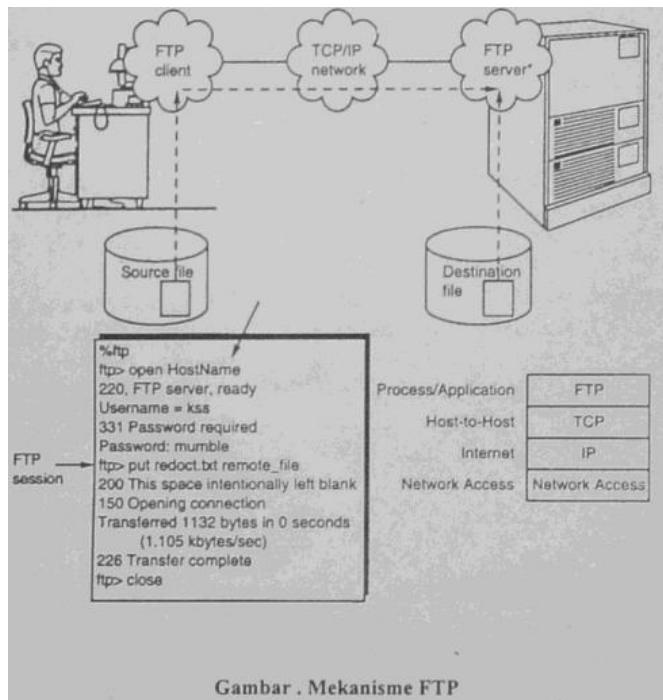

- Melihat daftar file pada directory remote dan local
- Mengganti nama dan menghapus file
- Transfer file dari host remote ke lokal (download)
- Transfer file dari host lokal ke remote (upload)

Pada gambar dibawah menunjukkan mekanisme transfer file dari host local ke remote, proses transfer file seperti ditunjukkan dengan tanda panah pada gambar tersebut. Tahapan FTP dimulai dari client memasuki jaringan TCP/IP, komputer remote yang akan dituju disebut host FTP, dan host FTP ini harus memiliki software FTP server yang telah diinstall agar dapat berinteraksi dengan sistem file pada host. Untuk mulai melakukan FTP, maka berikan perintah seperti berikut ini:

```
%ftp [hostname]
```

Tanda % adalah prompt default pada OS unix, *hostname* merupakan nama searasimbolik atau IP address dari host yang akan dituju. Bila sudah dapat

tersambung maka akan ditanyakan nama *user* dan *password*, isian nama *user* dan *password* sesuai dengan *account* yang diberikan seperti yang digunakan bila user menggunakan server tersebut, tetapi pada FTP server yang umum, untuk nama user dapat digunakan ftp dan anonymous dengan menggunakan password yaitu e-mail, akan tetapi memiliki hak akses yang terbatas sesuai yang ditetapkan administrator FTP server.

#### IV. Langkah percobaan:

1. Login ke sistem Linux sebagai root
2. Cek Apakah konfigurasi alamat IP untuk host  

```
[root@WSC204-02 root]# ifconfig
eth0    Link encap:Ethernet HWaddr 00:00:E2:9A:C2:17
        inet addr:10.252.105.102 Bcast:10.252.105.255
          Mask:255.255.255.0
          UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
          RX packets:1446 errors:0 dropped:0 overruns:0 frame:0
          TX packets:1000 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:100
          RX bytes:725880 (708.8 Kb) TX bytes:254267 (248.3 Kb)
          Interrupt:11 Base address:0xc000 Memory:e8000000-e8000038

lo      Link encap:Local Loopback
        inet addr:127.0.0.1 Mask:255.0.0.0
        UP LOOPBACK RUNNING MTU:16436 Metric:1
        RX packets:11983 errors:0 dropped:0 overruns:0 frame:0
        TX packets:11983 errors:0 dropped:0 overruns:0 carrier:0
        collisions:0 txqueuelen:0
        RX bytes:818451 (799.2 Kb) TX bytes:818451 (799.2 Kb)
[root@WSC204-02 root]# netstat -r
```

```
Kernel IP routing table
Destination     Gateway         Genmask        Flags MSS Window irtt
Iface
10.252.105.0   *      255.255.255.0 U      0 0       0 eth0
169.254.0.0    *      255.255.0.0  U      0 0       0 eth0
127.0.0.0      *      255.0.0.0   U      0 0       0 lo
default        10.252.105.1 0.0.0.0     UG     0 0       0 eth0
```

Interface : Ethernet card (eth0)

IP Address : 10.252.105.102

Subnet Mask: 255.255.255.0

Default Gateway: 10.252.105.1

3. Catahalah berapa nomor port yang digunakan oleh ftp

```
[root@WSC204-02 root]# cat /etc/services |grep ftp
ftp-data      20/tcp
ftp-data      20/udp
# 21 is registered to ftp, but also used by fsp
ftp          21/tcp
ftp          21/udp      fsp fspd
tftp         69/tcp
tftp         69/udp
sftp         115/tcp
sftp         115/udp
tftp-mcast   1758/tcp
tftp-mcast   1758/udp
mtftp        1759/udp
venus-se     2431/udp      # udp sftp side effect
codasrv-se   2433/udp      # udp sftp side effectQ
```

Port untuk ftp : 20 dan 21

Protol untuk ftp : tcp

4. Cek apakah program vsftpd sudah terinstall atau belum. Jika sudah, langsung kerjakan langkah nomor 8.

```
[root@WSC204-02 root]# rpm -qa|grep vsftpd
vsftpd-1.1.3-8
```

Versi vsftpd adalah 1.1.3-8

## 5-7 Proses Installasi vsftpd

8. Mengaktifkan vsftpd server

```
[root@WSC204-02 xinetd.d]# rpm -ql vsftpd
/etc/logrotate.d/vsftpd.log
/etc/pam.d/vsftpd
/etc/rc.d/init.d/vsftpd
/etc/vsftpd
/etc/vsftpd.ftpusers
/etc/vsftpd.user_list
/etc/vsftpd/vsftpd.conf

```

```
[root@WSC204-02 xinetd.d]# vi /etc/vsftpd/vsftpd.conf
# Example config file /etc/vsftpd.conf
#
# The default compiled in settings are very paranoid. This sample file
# loosens things up a bit, to make the ftp daemon more usable.
#
# Allow anonymous FTP?
anonymous_enable=YES
#
# Uncomment this to allow local users to log in.
local_enable=YES
#
# Uncomment this to enable any form of FTP write command.
write_enable=YES
#
# Default umask for local users is 077. You may wish to change this to
022,
# if your users expect that (022 is used by most other ftpd's)
local_umask=022
#
# Uncomment this to allow the anonymous FTP user to upload files. This
only
# has an effect if the above global write enable is activated. Also, you
will
# obviously need to create a directory writable by the FTP user.
#anon_upload_enable=YES
#
# Uncomment this if you want the anonymous FTP user to be able to
create
# new directories.
#anon_mkdir_write_enable=YES
#
# Activate directory messages - messages given to remote users when
they
# go into a certain directory.
dirmessage_enable=YES
```

```

#
# Activate logging of uploads/downloads.
xferlog_enable=YES
#
# Make sure PORT transfer connections originate from port 20 (ftp-data).
connect_from_port_20=YES
#
# If you want, you can arrange for uploaded anonymous files to be
owned by
# a different user. Note! Using "root" for uploaded files is not
# recommended!
#chown_uploads=YES
#chown_username=whoever
#
# You may override where the log file goes if you like. The default is
shown
# below.
#xferlog_file=/var/log/vsftpd.log
#
# If you want, you can have your log file in standard ftpd xferlog format
xferlog_std_format=YES
#
# You may change the default value for timing out an idle session.
#idle_session_timeout=600
#
#
# You may change the default value for timing out a data connection.
#data_connection_timeout=120
#
# It is recommended that you define on your system a unique user which
the
# ftp server can use as a totally isolated and unprivileged user.
#nopriv_user=ftpsecure
#
# Enable this and the server will recognise asynchronous ABOR requests.
Not
# recommended for security (the code is non-trivial). Not enabling it,
# however, may confuse older FTP clients.
#async_abor_enable=YES
#
# By default the server will pretend to allow ASCII mode but in fact
ignore
# the request. Turn on the below options to have the server actually do
ASCII
# mangling on files when in ASCII mode.
# Beware that turning on ascii_download_enable enables malicious
remote parties
# to consume your I/O resources, by issuing the command "SIZE
/big/file" in
# ASCII mode.
# These ASCII options are split into upload and download because you
may wish
# to enable ASCII uploads (to prevent uploaded scripts etc. from
breaking),
# without the DoS risk of SIZE and ASCII downloads. ASCII mangling
should be
# on the client anyway..

```

```

#ascii_upload_enable=YES
#ascii_download_enable=YES
#
# You may fully customise the login banner string:
#ftpd_banner=Welcome to blah FTP service.
#
# You may specify a file of disallowed anonymous e-mail addresses.
Apparently
# useful for combatting certain DoS attacks.
#deny_email_enable=YES
# (default follows)
#banned_email_file=/etc/vsftpd.banned_emails
#
# You may specify an explicit list of local users to chroot() to their home
# directory. If chroot_local_user is YES, then this list becomes a list of
# users to NOT chroot().
#chroot_list_enable=YES
# (default follows)
#chroot_list_file=/etc/vsftpd.chroot_list
#
# You may activate the "-R" option to the builtin ls. This is disabled by
# default to avoid remote users being able to cause excessive I/O on
large
# sites. However, some broken FTP clients such as "ncftp" and "mirror"
assume
# the presence of the "-R" option, so there is a strong case for enabling
it.
#ls_recurse_enable=YES

pam_service_name=vsftpd
userlist_enable=YES
#enable for standalone mode
listen=YES
tcp_wrappers=YES
#/etc/rc.d/init.d/vsftpd start
[root@WSC204-02 xinetd.d]# vi /etc/rc.d/init.d/vsftpd start

#!/bin/bash
#
# vsftpd      This shell script takes care of starting and stopping
#              standalone vsftpd.
#
# chkconfig: - 60 50
# description: Vsftpd is a ftp daemon, which is the program \
#               that answers incoming ftp service requests.
# processname: vsftpd
# config: /etc/vsftpd/vsftpd.conf

# Source function library.

*)
    echo $"Usage: $0 {start|stop|restart|condrestart|status}"
    exit 1
esac

exit $RETVAL
[root@WSC204-02 xinetd.d]# /etc/rc.d/init.d/vsftpd start
Starting vsftpd for vsftpd: [ OK ]

```

Konfigurasi dari vsftpd disimpan di /etc/vsftpd/vsftpd.conf dan untuk mengaktifkan atau merestart vsftpd adalah dengan /etc/rc.d/init.d/vsftpd

9. Menghapus rule firewall

```
[root@WSC204-02 xinetd.d]#iptables -F
```

10. Ujicoba dari localhost

```
[root@WSC204-02 etc]# ftp localhost
Connected to localhost.localdomain.
220 (vsFTPd 1.1.3)
530 Please login with USER and PASS.
530 Please login with USER and PASS.
KERBEROS_V4 rejected as an authentication type
Name (localhost:root):
```

Proses ftp berhasil

11. Cek kerja dari ftp server anda dengan melakukan koneksi ftp ke server anda sendiri (localhost/hostname dari server anda) dengan menjalankan perintah: #**ftp localhost** atau #**ftp nama\_host\_server**. Tuliskan pesan yang muncul.

```
[root@WSC204-02 etc]# ftp localhost
Connected to localhost.localdomain.
220 (vsFTPd 1.1.3)
530 Please login with USER and PASS.
530 Please login with USER and PASS.
KERBEROS_V4 rejected as an authentication type
Name (localhost:root):
```

12. Login sebagai user yang telah anda buat/nama user anda. Setelah itu ketikkan perintah >**help**. Tuliskan perintah-perintah tersebut. Catatan: untuk melihat deskripsi perintah ftp jalankan perintah >help nama perintah.

Kemudian Lengkapi tabel berikut ini:

<b>Perintah</b>	<b>Penjelasan</b>
bye	Keluar dari ftp
close	Menghentikan sesi ftp
binary	Mengeset tipe transfer binary
user	Mengirim informasi user baru
!	Keluar
get	Menerima file
mget	Mengambil file banyak
put	Mengirim satu file
mput	Mengirim banyak file
cd	Mengubah direktori aktif pada remote
mdir	Melihat isi dari direktori
mkdir	Membuat direktori pada remote PC
reset	Perintah membersihkan antrian
restart	Restart file pada hitungan byte

13. Buat tabel yang berisikan konfigurasi file utama beserta nilai defaultnya dan jelaskan maksudnya tiap baris konfigurasi:

<b>Baris ke</b>	<b>Deklarasi konfigurasi</b>	<b>Nilai Default</b>	<b>Keterangan</b>
1	Anonymous_enable	YES	Menyatakan apakah ftp server dapat diakses secara anonymous (public anonymous ftp server)
2	Local_enable	YES	Menyatakan apakah local user dapat log in
3	Write_enable	YES	Menyatakan apakah ftp dapat menggunakan perintah write
4	Local_umask	077	Menyatakan umask dari local user
5	anon_upload_enable	YES	Menyatakan apakah anonymous dapat men-upload file
6	anon_mkdir_write_enable	YES	Menyatakan apakah anonymous dapat men-create directory baru
7	Dirmessage_enable	YES	Untuk mengaktifkan pesan-pesan jika user masuk ke directory khusus
8	xferlog_enable	YES	Untuk mengaktifkan fasilitas upload dan download
9	connect_from_port_20	YES	Menyatakan koneksi PORT transfer original dari port 20 (ftp data)
10	Chown_uploads	YES	Jika diinginkan, anda dapat mengatur upload untuk anonymous untuk dijadikan milik pribadi oleh user
11	Chown_username	Whoever	User name untuk anonymous
12	xferlog_file	/var/log/vsft pd.log	Letak dari pada file xferlog
13	xferlog_std_format	YES	Jika anda ingin log file dalam format xferlog standart
14	Idle_session_timeout	600	Timing untuk sesi idle
15	Data_connection_time_out	120	Timing untuk koneksi data keluar
16	nopriv_user	ftpsecure	Direkomendasikan untuk menggunakan bila menginginkan user yang unik

17	async_abor_enable	YES	Untuk mengenali request dari ABOR asynchronous
18	ascii_upload_enable	YES	Mengaktifkan upload ASCII
19	ascii_download_enable	YES	Mengaktifkan download ASCII
20	ftpd_banner	Welcome to blah FTP service.	Untuk merubah (costumize) banner saat login
21	deny_email_enable	YES	Jika menginginkan untuk mengabaikan e-mail dari anonymous
22	banned_email_file	=/etc/vsftpd.banned_emails	Lokasi dari pada alamat email dari anonymous
23	chroot_list_enable	YES	Mengaktifkan file choort
24	chroot_list_file	=/etc/vsftpd.chroot_list	Lokasi dari file choort
25	ls_recurse_enable	NO	Untuk mengaktifkan perintah ls pada ftp
26	pam_service_name	VSFTPD	Nama service pam
27	userlist_enable	YES	Untuk mengaktifkan userlist
28	Listen	YES	Untuk mengaktifkan fasilitas listen
29	tcp_wrappers	YES	Untuk mengaktifkan fasilitas tcp

14. Berdiskusilah dengan rekan-rekan disebelah anda, perintahkan rekan-rekan anda untuk melakukan ftp ke PC anda.

```

226 Directory send OK.
[root@WSC204-02 etc]# finger
Login Name Tty Idle Login Time Office Office Phone
root root *:0 Jul 28 09:35
root root pts/0 Jul 28 10:01 (:0.0)

```

Perintah hostname, whoami, finger, dll dapat berjalan di telnet karena telnet berfungsi sebagai remote akses ke komputer lain, sebaliknya perintah tersebut tidak berjalan di ftp karena ftp di khususkan untuk transfer file

#### 15. Amatilah proses-proses yang terjadi di PC anda (server)

```
[root@WSC204-02 etc]# finger
Login Name Tty Idle Login Time Office Office Phone
```

```

root      root      *:0          Jul 28 09:35
root      root      pts/0        Jul 28 10:01 (:0.0)
[root@WSC204-02 etc]# netstat

User ftp memiliki kekuasaan untuk dapat melakukan fasilitas lebih banyak dari pada anonymous karena anonymous di tujuhan untuk public (umum) jadi secara otomatis kekuasaanya dalam ftp terbatas.

User ftp dapat melakukan download dan upload sedang anonymous hanya dapat melakukan download saja (itupun tidak semua dapat didownload secara penuh)
